Course Overview

Dermoscopy empowers the clinician with improved diagnostic capability in the management of primary cutaneous malignancy. Histopathology usually defines the diagnosis, guides optimal therapeutic decisions and predicts prognosis. This course extends the knowledge and skill required to understand the application and conceptual links between dermoscopy and histopathology.

Program Objectives

The goal of this program is to provide advanced training in the application of dermoscopy to diagnosis and the management of skin cancer in the both primary care and specialist practice.

The Certificate course will provide the clinician with a range of skills at an advanced level in:

- Dermoscopes: non polarized versus polarized
- Evidence based application of dermoscopy
- Pigmented and non pigmented structures
- Dermoscopic analysis of vascular patterns
- Dermoscopy of melanocytic lesions
- Use of dermoscopy in the management of Basal Cell Carcinoma
- Keratinocytic lesions, diagnosis and management
- Important dermoscopy features of clinically relevant miscellaneous entities
- Dermoscopy feature variation in different anatomic sites

Certificate Course Format

The Certificate course is designed to meet the needs of busy medical practitioners by providing a flexible program with the majority of its requirements conducted in your own time.

The Course Includes:

- A full colour folder including reference materials and all PowerPoint slides
- All workshop materials
- Lunch, morning and afternoon teas

Workshop Delivery

The two day workshop segment of the course is presented by renown Skin Cancer Dermatologists and Nurse Practitioner in an interactive and case based program which is unique in the US.

Workshop Timetable

Saturday

- Introduction
- Polarised Versus Non Polarised dermatoscopes
- Common dermoscopy: histopathology correlations with pigmented structures
- 2-step algorithm
- Non-melanocytic
 - BCC & SCC
 - DF, SK
 - Hemangioma & CCA
- Structureless lesions
- Basal Cell Carcinoma: subtypes and differentials

Sunday

- Melanocytic
 - Nevi patterns
 - Melanoma specific
- Special sites
 - Face
 - Volar skin
- Exceptions to the rule
- Cases for the audience
- Summary

Presenters

This workshop will be presented by internationally renowned experts in their field:

Dr. Ashfaq A. Marghoob, MD
Head, Hauppauge Dermatology Section
Memorial Sloan-Kettering, NY.

Dr. Harold S. Rabinovitz, MD
Clinical Professor of Dermatology
University of Miami School of Medicine. FL.

Margaret Oliverio, ARNP

Award

University of Queensland School of Medicine
Certificate in Advanced Dermoscopy

Date and Location

16-17 November, 2013 Ft. Lauderdale, FL.
