Course Description:

Anti-Aging and Regenerative Biomedical Technologies conference is an opportunity to present practicing physicians and health care professionals with reports on breaking technologies from fields of clinical medicine focused on the prevention and early intervention of aging related disease processes. In addition the Conference is an opportunity to highlight new medical techniques from around the world that can have an impact in the early detection, prevention, treatment of aging related disorders and regenerative medicine.

Course Objectives:

- Develop a comprehensive nutritional program to support the individual woman's genetic polymorphisms
- The effects of progesterone on the risk of breast cancer
- Review pathophysiologic mechanisms of diastolic dysfunction in relation to estrogen loss.
- Discuss effects of hormone replacement therapy on diastolic function
- Understand the use of Oxytocin; Estrogen and Progesterone to balance improve sexual response.
- Decide in which patients assessment of omega-3 blood levels would assist with risk stratification
- Understand practical methods to evaluate nutritional status in patients
